

Substance Abuse Treatment

Dual Treatment: ARM provides an array of Substance Abuse and Mental Health services tailored to fit the individual needs of every client with the help of the initial assessment.

Intensive Outpatient Program:

An intensive outpatient program serving adults who are struggling with alcohol and or drug use. It runs for 12 weeks meeting 3-4 days a week, approximately 3 hours each day. Clients receive recovery skills, education, support and an environment conducive to motivating lasting change.

The program also connects clients to sober support activities in the community.

SA2 (Substance Abuse-Self Awareness):

A combination of bi-weekly individual or group counseling and case management services that provide guidance and support for adults who are at risk of alcohol and or drug use. Clients who have not developed a substance use dependency or have sustained a substantial amount of “clean time” receive ample sober support along with intense recovery skills development, and maintenance where appropriate.
